Your input will help the research team understand the challenges of keeping nursing records in NHS Scotland.

The information you provide will be included in a visually rich report which will be presented to the NHS Scotland Open Innovation team and the Scottish Government as an example of the challenges surrounding nursing records. It may also be available to the public.

The audio recordings, film and photography may be used in exhibitions, publications, journal articles, conference papers and presentations, lectures or broadcasts. You will be asked for your consent for us to use this data.

Your information will be held in accordance with The Glasgow School of Art Data Protection Policy and no personal identifiable information (e.g. your name) will be used in any publication without your consent.

If asked to be interviewed, we would talk about your experience of nursing records in Scotland as well as your thoughts on improvements.

We are carrying out a series of interviews with people who have experience and knowledge of nursing records in Scotland. The insights from these interviews will then inform the activities of this Experience Lab.

The NHS Scotland Open Innovation team has invited researchers from The Glasgow School of Art in partnership with the NHS Scotland Open Innovation team.

Open Innovation offers a platform to harness the ideas, insights and experience of those who can help organisations do things better and is funded by Scottish Enterprise.

The project is being organised by The Glasgow School of Art in partnership with the NHS Scotland Open Innovation team.

The project is funded by the Digital Health & Care Institute (DHI), which is a Scottish Funding Council initiative between The Glasgow School of Art, The University of Strathclyde and NHS 24.

The DHI aims to bring together health, care and third sector professionals, academics and industry partners to work together to develop innovative ideas to overcome health and social care challenges.

The project aims to consider new ways of keeping nursing records that are accessible and valuable with the potential to save nurses’ time and improve the quality of nursing care in Scotland.

We are carrying out a series of interviews with people who have experience and knowledge of nursing records in Scotland. The insights from these interviews will then inform the activities of this Experience Lab.

The NHS Scotland Open Innovation team has invited researchers from The Glasgow School of Art to help create a visual representation of the current state of nursing records based on stakeholder interviews and an Experience Lab. The outcome of this project will be a clear description of the Open Innovation for Nursing Records challenge.

You will be invited to take part in an Experience Lab to inform a research project led by The Glasgow School of Art. Attendees will be representative of the stakeholders of nursing care and health innovation in NHS Scotland and the Scottish Government; industry and; those who have the will and capability to direct and enact the outcomes.

We like to record audio as well as take photographs and film during an Experience Lab. This will help us keep a record of the ideas and discussion generated in the lab.

The insights gathered from the interviews and the Experience Lab will be presented in the form of a visually rich report.
